2020

WHY HARRY JAMES?

Harry James Group's mission is to be the leader in supplying manpower internationally to world changing industries. With our ear to the ground regarding activity in these markets, combined with our extensive pool of talent, we are the prime staffing solution partner for your business.

Harry James Group currently operates across the following sectors:

Solar
Wind
Energy Storage
E-Mobility
ESG Investment

A company that cares – Harry James Group is at the forefront of providing premium manpower consultancy services for industries that are changing our world and are the sectors of the future.

We live and breathe renewable energy. Passionate about people, we deliver the best talent to companies all over the world across an array of sectors. Harry James Group will be the global leader in Renewable Energy talent solutions.

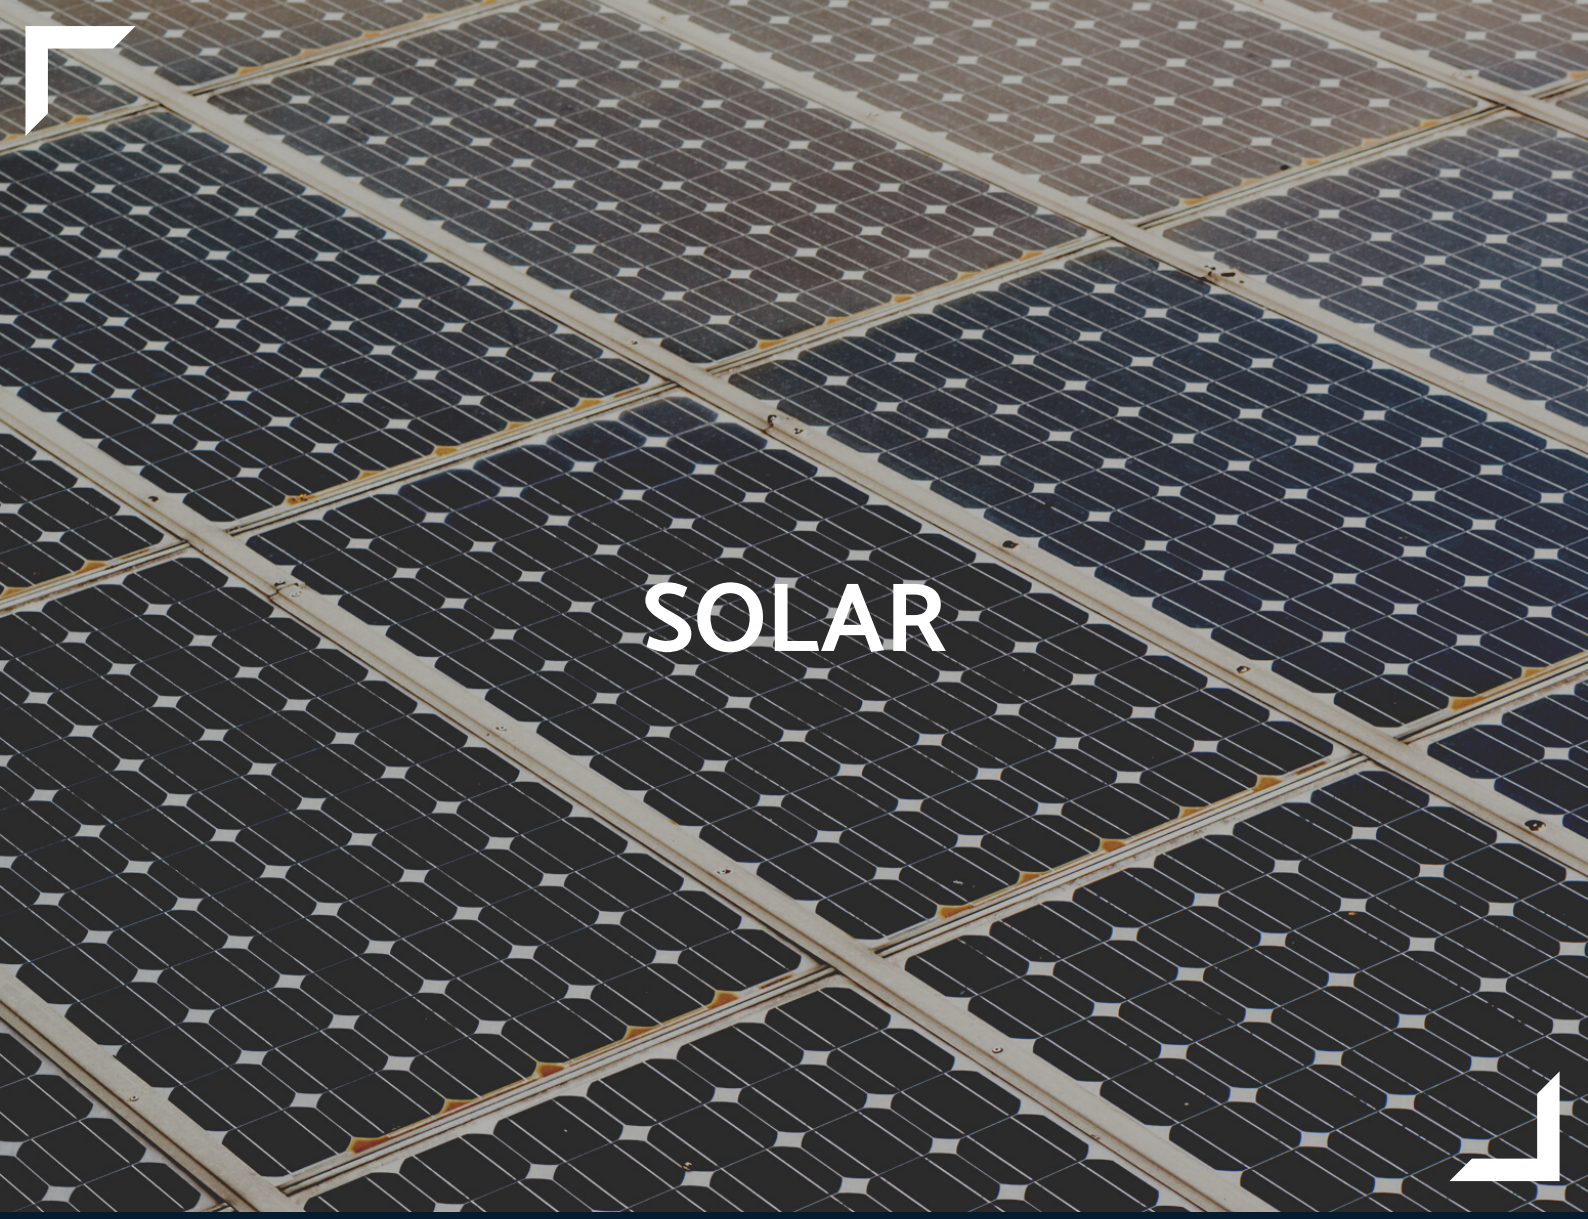

Harry James Group operates at a level of high efficiency and will act autonomously as an extension of your HR department. Regular contact is key to our success as your recruitment solution partner and strive to host regular online meetings to adapt to real time changes and provide bespoke innovative solutions for client needs.

Wind Power

Wind Energy, one the fastest growing renewable energy markets and one of the lowest-priced energy sources available today. Harry James Group are Wind Energy recruitment specialists, experiencing first hand the european adaptation to off-shore wind farms and are here for the shift towards off-shore implementation in the USA.

Being based in the north of the UK, both onshore and offshore Wind Energy is at the heart of our business and regional activity. Projects such as the Whitelee Wind Farm is just a stone's throw away from head office and HJG believes wind will be the driving force in the UK’s drive towards green energy and we want to be involved in the process.

Solar Power

The Solar Industry is rapidly growing. With more people in employment in Solar markets than those in upstream Oil & Gas, the investment and growth in this market shows no sign of stopping. We know Solar Energy technology has only just scratched the proverbial surface of what is to come. With nations and companies finally realising the potential of this bountiful natural resource and we're here to source the talent to help them do it.

With technical developments further driving down the cost of Solar energy output, it is not surprising to see further adoption across the world with governments working hard to increase both commercial and residential acceptance of solar. Arguably one of the most exciting industries in the current climate will be greatly helped with the development of photovoltaic storage systems.

Energy Storage

Energy storage is set to play a pivotal role in the next stages of renewable energy adaptation and decarbonisation of the current energy market. With growing social and environmental pressures, governments around the world will be encouraged into the step towards a green future, this has brought forward the significant potential, and importance, of electricity storage to facilitate deep decarbonisation.

With the sector set to grow over 750% in the coming 5 years, we understand that competition for top professionals in this area will increase, however having a recruitment partner that is intertwined with top talent is key.

E-Mobility

The way in which we transport both people and goods is changing. Both technological advancement and social movements have forced change towards E-Mobility. One fifth of USA emissions come from vehicles with combustion engines, to turn the global warming curve in the right direction, there needs to be a dramatic shift towards the adoption of E-Mobility and cleaner travel. Social attitudes are changing along with technological advancements and government policy to restrict the sale of diesel powered vehicles and introduction of low emission zones will speed up the shift to the cleaner ecosystem.

Harry James Group have the connections to the manpower needed to take control of this emerging and vitally important market. From specific technical roles, to business leaders and executives, the array of talent in our connection pool will add value to any client needs.

ESG Investing

Environmental, social and governance are metrics that companies are applying to their annual reports without governmental pressure, but with the changing attitude of shareholders and external social pressures. ESG investment is a policy that invests in companies with strong environmental, social and governance practices, as well as seeking to find value.

While finance roles typically have shareholder value at the forefront of their goals, ESG differs from SRI (socially responsible investing) due to the focus on value. With the rise of consumer purchasing power and responsible shopping, the financial industry has followed suit and some funds are exclusively picked via ESG principles. This sector is one which Harry James Group are passionate about and understand the need for responsible financial managers and the future of finance.

SERVICES

Our Services

To work with a recruitment consultancy in this ever changing, rapidly growing sector it is fundamental to partner with a team that fully understands the industry and can act as an extension of your HR department. Allowing you the time and energy to make the vital strategic decisions, knowing your manpower search is covered.
